ABOUT ME

Software developer with over five years of professional experience building full-stack applications. Comfortable working across the entire lifecycle — from gathering business requirements through implementation to production support. Experienced in coordinating directly with clients to align expectations and deliver solutions that satisfy real business needs. Passionate about clean architecture, well-designed APIs, and continuous learning. Currently developing skills in software architecture through dedicated courses and practical application.

EXPERIENCE

Full-Stack Software Engineer

Nov 2020 — Present

MIKRONIKA Sp. z o.o.

- Analyze and adjust business requirements in close collaboration with stakeholders
- Design and implement new backend services and frontend components
- Design and develop applications using microservices and modular monolith architectures
- Build and maintain RESTful API interfaces consumed by multiple client applications
- Diagnose and resolve software defects across the full stack
- Coordinate directly with clients to determine and satisfy their expectations
- Collaborate within agile teams of up to 6 members (developers and QA)

Key Achievements

- Took over management of a project — acting as project owner, setting its direction, roadmap and delivery timelines
- Onboarded and mentored a new team member to full productivity

In progress

- Introduced automated tests using JUnit and Mockito to an existing project
- Initiated occasional pair-programming sessions to evaluate team engagement and strengthen collaboration
- Refactored legacy system-critical modules and extended them with new capabilities (e.g., permission groups), enabling faster feature delivery and reducing regression risk
- Pioneered adoption of AI-assisted development tools (Claude Code) within the team and contributed to shaping company-wide AI usage policy and best-practice guidelines

EDUCATION

Bachelor of Computer Science — Programming Focus

Sep 2017 — Jan 2021

Academy of Computer Science and Management "Copernicus", Wrocław

SIDE PROJECTS

CinemaFinder

Actively developed product — aggregates movies and showtimes so you can easily find where a film is currently playing. Born out of frustration when I couldn't find Interstellar anywhere!

Java 21

Spring Boot

Next.js

React Native

TypeScript

 Server  Web App

Photographer Portfolio

First client project — a simple gallery website with various image sizes and a contact form. My very first project that went live!

Next.js

TypeScript

Tailwind CSS

 GitHub  rozbickipawel.pl

Sweet Creations

Simple business card website showcasing custom cakes made by my wife — if you'd like one, she takes orders!
